

What is SDP 2.0?

The Sustainable Dairy Partnership (SDP) is the global B2B tool for sustainability reporting in dairy. It cuts duplication by aligning with Dairy Sustainability Framework (DSF), national programmes, and ESG frameworks, and provides credible, comparable data through peer-designed, independently verified reporting.

SDP 2.0 continues to evolve with the developing sector's reporting needs:

- A digital hub that cuts duplication and delivers efficient, reliable data.
- Independent verification across environment, animal welfare, human rights, and livelihoods.
- Alignment with national programmes, ESG frameworks, and national regulations.
- A 5-stage matrix guiding processors from commitment to leadership and collective improvement.

Why it matters

- A single industry standard that cuts duplication, simplifies B2B engagement, and integrates national and ESG frameworks.
- Credible assurance independently verified data, provides high-integrity metrics for ESG disclosures and sourcing policies.
- Continuous collective improvement aligns buyers and processors to drive ongoing progress on environment, animal welfare, human rights, and livelihoods.
- One efficient reporting framework that reduces audit fatigue and enables faster, more consistent decision-making.

Who benefits?

Processors

- Avoid multiple audits
- Share verified sustainability data with buyers
- Demonstrate continuous improvement

"Achieving Stage 5 - the highest level of reporting in the SDP gives our customers and prospective partners an independently verified signal of sustainability progress across our supply base. The SDP simplified assurance, enhanced collaboration, and strengthened the trust our buyers need for their own sustainability commitments and buying decisions."

Zita McCarthy, Senior Sustainability Manager, Kerry Dairy Ireland (Processor)

Buyers & Traders

- Real-time access to trusted suppliers' data
- Simplify ESG reporting and compliance
- Strengthen supply chain credibility

"The SDP is a game-changer for the dairy industry. It brings clarity and alignment to a space that has long been fragmented. As a processor, buyer, and trader, we see firsthand how SDP simplifies reporting and fosters collaboration."

Andreas Zweifel, Global Head of Sustainability Dairy, ofi (Processor, Buyer, and Trader)

Join the movement

The SDP represents more than **30% of global dairy volume** through the **SAI Platform Dairy Working Group** a pre-competitive collaboration of leading processors and buyers.
